

The following information provides a breakdown of the lot number for all Lonmat flooring.

Color Number – This is the single digit color number associated with the flooring (e.g., 5 equals M05).

Month of Manufacture – This number is the month the lot was manufactured, without any leading zeros (e.g., 5 equals May, or 12 equals December).

Year of Manufacture – This two digit number is the year the lot was manufactured (e.g., 25 equals 2025).

Production Run – This single digit number indicates the production run for the noted month and year, and is used to separate lots produced within the same month (e.g. 512251 would be the first production run of M05 in December 2025, while 512252, would be the second production run that same month).

All Lonmat flooring has its lot number stamped on the back of the flooring. This meets the requirement of MIL-DTL-15562 §3.17 to include the month and year in the identification stamp, since this information is included in the lot number.
